Energy Ethics in Graduate Education and Public Policy: Enhancing the Conversation

Description

This workshop was intended for educators, policymakers, and representatives from professional societies. It was held on September 12-13, 2013 and featured presentations and discussions to spur participants to think beyond the technical aspects of energy. Participants explored the benefits and challenges of efforts to include energy ethics in graduate education as well as the role of public policy and professional society leadership in encouraging graduate education on energy ethics.
