Do *you* want an open source repository with…

Merged features
from community and stakeholder contributions

Multi-Tenancy
in a provider-consumer model

Interoperability
with systems like DataCite, Crossref, OAIPMH API

Portability
of components deployed via Cloud or in-premise

Stability
in uptime and after platform upgrades

Scalability
for all sizes of collections and institutions

Security
for systems, content, and authors

We want that, too!

Shared Research Repository https://iro.bl.uk/
The British Library launched a Shared Research Repository infrastructure for 6 partner heritage organisations with active research bases, classed as Independent Research Organisations.

To meet expectations of Open Access and data sharing, we put expertise into building a multi-tenant research repository, developed by Ubiquity Press, shared across IRO partners. Pathways to long-term preservation and community codebase contributions are ongoing priorities.

Advancing Hyku Project https://advancinghyku.io/
The University of Virginia and Ubiquity Press are our partners in the Advancing Hyku project, funded by Arcadia. We're all partnering to further work with the repository community, representing wider needs within the Advancing Hyku project.
